- Percentages for degrees that do not match college type are excluded due to low counts.

Appendix

Data Sources

We used data from the Baltimore Education Research Consortium (BERC) archive for Baltimore City from the 2014-15 through 2023-24 school years. For the current report, relevant BERC archive components include administrative student records from City Schools, data from the National Student Clearinghouse, and Federal Student Aid.

City Schools Graduates

The data featured in this report represent Baltimore City Public Schools high school graduates only, i.e., students with an exit code indicating receipt of a regular diploma (C60) or early graduation (C70). Graduates included any student with these codes dated between September 1 and August 31 of respective school years (e.g., students awarded diplomas between September 1, 2023 and August 31, 2024 compose the class of 2024).

College Enrollment and Degree Completion

The most comprehensive data source to identify college enrollment and degree completion at colleges across the United States is the National Student Clearinghouse (NSC). More than 3,700 colleges, training institutes, and universities participate with the NSC, capturing 97% of all students enrolled in public and private colleges across the United States and territories (NSC, n.d.). However, students enrolled at some small schools (specialty trade schools, arts conservatories, and seminaries) are less likely to be represented, as such institutions are less likely to participate with the NSC.

NSC data do not include information on full-time versus part-time enrollment intensity for all participating colleges, and intensity could affect time to degree completion. NSC also does not report information about whether students enroll in courses that are credit-bearing (i.e., developmental or non-developmental). To our knowledge, NSC enrollments represent only those in college-credit-bearing courses, yet we are certain this limitation applies to postsecondary enrollments in Maryland.

Fall enrollments were identified mainly from NSC data (NB., some records reflect data received directly from the Institutional Research Office at Morgan State University, which provided a patch for fall 2016 enrollments that were incomplete in the NSC data for that term). Fall enrollment status was defined by college enrollment dates reported that occurred between September 1 and December 31 following high school graduation for each respective cohort year.

College degree completions represent only those indicated in the NSC data within six years after a student's on-time fall enrollment window. Therefore, degrees are reported among fall enrollees only. Degree type (2-year degrees or 1-year certificate; 4-year degrees) are inferred from the type of institution in which the student enrolled unless otherwise specified in the NSC data.

The reader should note a few caveats when interpreting results from NSC data. One challenge is that the NSC uses data submitted by the school district to perform a matching algorithm with data it receives from participating postsecondary institutions. In general, the match utilizes student names, high school codes, and birthdates; thus, the data returned to the school district may contain errors. These errors may occur when the information a college provides for a student is different from that submitted by the school district (e.g., name spelling differences or inaccurate birthdates). College students are also permitted to place a "FERPA block" on their postsecondary data, which would result in false negatives for college enrollment. Furthermore, false positives for college enrollment may occur when, for instance, a different student with an identical name or birthdate is identified as enrolled.

Such challenges make NSC a dynamic database, even though data on the same graduates are reported to the requesting district for up to seven consecutive years. City Schools has solicited enrollment data from NSC for over 20 years, and BERC has assisted in the analysis of this data since 2009. BERC has determined that there were a relatively small number of instances where no enrollment was reported for a student in the most recent NSC file, but earlier NSC files did indicate an enrollment event. There were also instances where previously reported degrees had been excluded from the newest data release. To generate the most liberal possible estimate of enrollment and degree completion, the current analysis prioritizes a positive status (e.g., fall enrollee, degree completer = TRUE) from information received over all NSC data reports, regardless of the most recently reported status.

College Applications and Summer Melt

Data on college applications and acceptances were obtained from City Schools student-level Naviance data. Naviance is an online platform accessed by students and school staff. Students may explore data about admittance rates and entering student qualifications at different colleges and use the platform to communicate with school counselors about colleges where they want to apply. Teachers at the school may access Naviance to generate recommendation letters for student applications, while school counselors can update information about a student application's status and paperwork as it is submitted to support students with meeting various deadlines. In the current report, we utilize Naviance data to capture the number of colleges for which students complete applications, as of the last day of the respective school year. This information therefore potentially excludes application completions occurring during the summer when graduated students are no longer supported by school counselors; in these cases, reported rates of completing three or more applications would be biased downward.

Second, we use information on whether students received an acceptance from any college as of the last day of school (including community colleges indicating the student submitted all required documentation). This information is paired with fall enrollment data from NSC to identify students experiencing summer melt. Summer melt is defined as having at least one college acceptance but no college enrollment record corresponding to fall enrollment dates. To the extent that college acceptances may occur after high school graduation and are not documented in Naviance, rates of summer melt would be biased downward.

In general, the quality of Naviance data may vary depending on counselor actions, consistency of student communication with school staff, and the emphasis school leaders place on using Naviance as a college access resource.

Federal Student Aid Data

Information regarding high school seniors' completion of FAFSA applications was obtained from studentaid.gov Data Center website (<https://studentaid.gov/data-center/student/application-volume/fafsa-completion-high-school>). The online system allows the analyst to view or download school-level information regarding the number of FAFSA forms completed by a particular reporting window for specific states, localities, and high schools. The data featured in this report represent FAFSA completions as of June 30 for each graduating class year and was further filtered to only those schools within Baltimore City Public Schools. The denominators used to determine percentages completing FAFSA were separately obtained by determining the number of 12th graders enrolled at each school as of January 1 of the respective graduating year as indicated in EOY Attendance files.

Data Suppression and Table Masking

Throughout this data digest, some values are masked to protect student privacy using BERC data suppression rules that are in accordance with City Schools reporting requirements and policies. For some groups, percentages are banded to prevent the recovery of a percentage that is 5% or less. The reader should not assume that the middle of a banded value is the true value as any value in the band is equally likely. The reader may notice that percentages for alternative high schools are inconsistently reported as a result of masking requirements. In the Data Digest, an indication of 'no grads' or 'no seniors this year' reflects a school opening or school closing, rather than no students meeting the outcome.

Human Subjects Review

The authors obtained approval from the Institutional Review Board (IRB) at Notre Dame of Maryland University to conduct this research.
